SCS1303 - Introduction to Software Engineering

Trello

Tutorial 05

Step-by-Step Guide

Step 1 — Navigate to the Trello Website

Open your browser and go to: <https://trello.com/>

Step 2 — Sign Up for Trello

1. Click **Sign Up** in the top-right corner of the page.
2. Register using your email address or your Google account.
3. Verify your email address by clicking the confirmation link sent to your inbox.

Step 3 — Create a Workspace

1. Once logged in, click on your **profile picture (avatar)** in the top-right corner of the screen.
2. Select **Create Workspace** from the dropdown menu.
3. Enter a name for your workspace (e.g. *Software Engineering Lab*) and add a short description.
4. Click **Continue** to create the workspace.

Step 4 — Create a New Board

1. From the home page, locate the workspace you just created under **Your Workspaces**.
 2. Click **Create new board**.
 3. Enter a name for your board (e.g. *Student Management System*).
 4. Set the visibility to **Workspace** so all team members can access it.
 5. Choose a background colour and click **Create**.
-

Step 5 — Invite Team Members

1. Click **Share** at the top of the board.
 2. Enter each team member's email address and send the invite.
 3. Each member must accept the invite to join the board.
-

Step 6 — Set Up Your Board Structure On your new board, create the following lists by clicking **Add a list** for each one, in this order:

1. **Product Backlog** — all features and tasks for the project
 2. **Sprint Backlog** — tasks selected to work on this week
 3. **To Do** — tasks that are ready to be started
 4. **In Progress** — tasks currently being worked on
 5. **Testing** — tasks that are built and being checked
 6. **Done** — tasks that are fully completed
-

Step 7 — Add Cards to the Product Backlog

1. In the **Product Backlog** list, click **Add a card**.
 2. Type the name of a feature or task your project needs (e.g. *User Login, Search Page, View Profile*).
 3. Add as many cards as your project requires.
-

Step 8 — Fill In Card Details Click on any card to open it and fill in the following:

1. **Description** — briefly describe what the task involves.

2. **Members** — assign a team member responsible for the task.
 3. **Due Date** — set a deadline for when the task should be completed.
 4. **Checklist** — break the task into smaller steps (e.g. Design → Build → Test).
 5. **Label** — use colour labels to categorise cards (e.g. Red for a feature, Yellow for a bug fix).
-

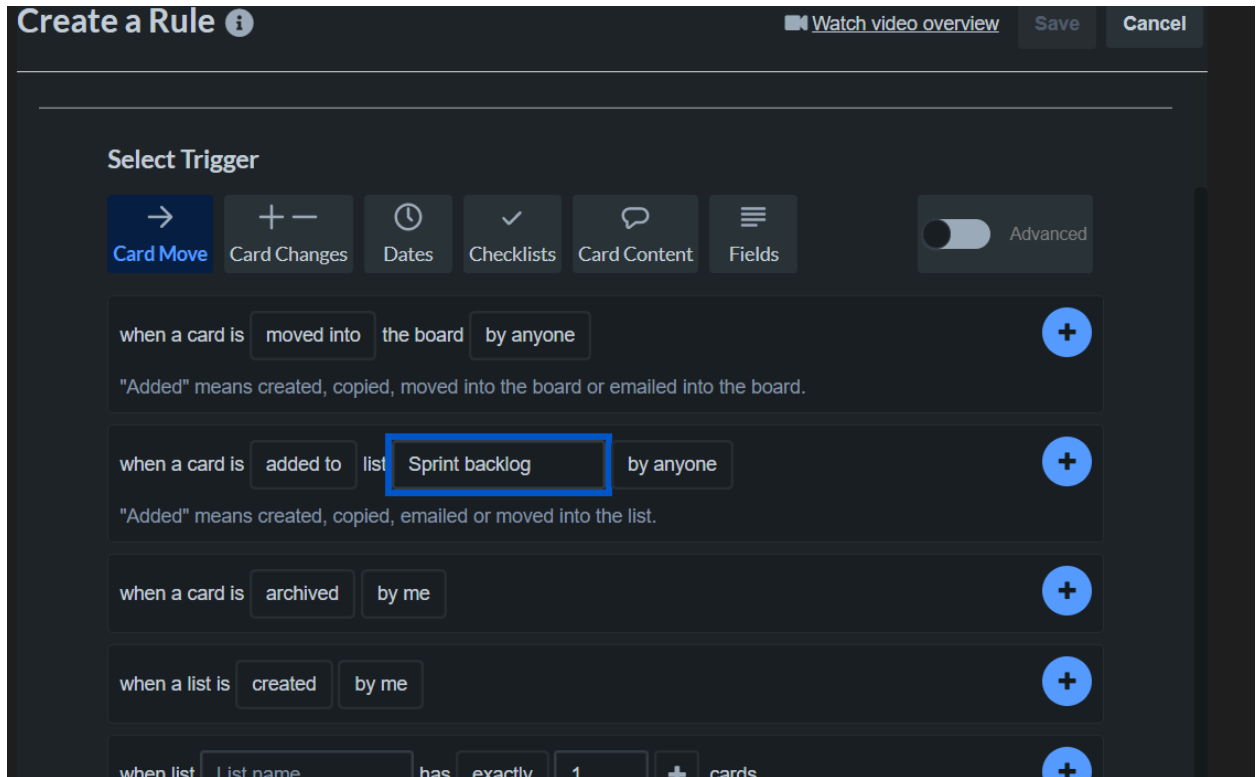

Step 9 — Move Cards Across the Board

1. Pick a few cards from **Product Backlog** and drag them into **Sprint Backlog** to indicate what your team will work on.
 2. As you work through tasks, drag each card from left to right: **Product Backlog** → **Sprint Backlog** → **To Do** → **In Progress** → **Testing** → **Done**
 3. Add a **comment** on the card each time you move it, describing what was done.
 4. Use **@mention** (e.g. @John) inside a comment to notify a specific team member about an update.
-

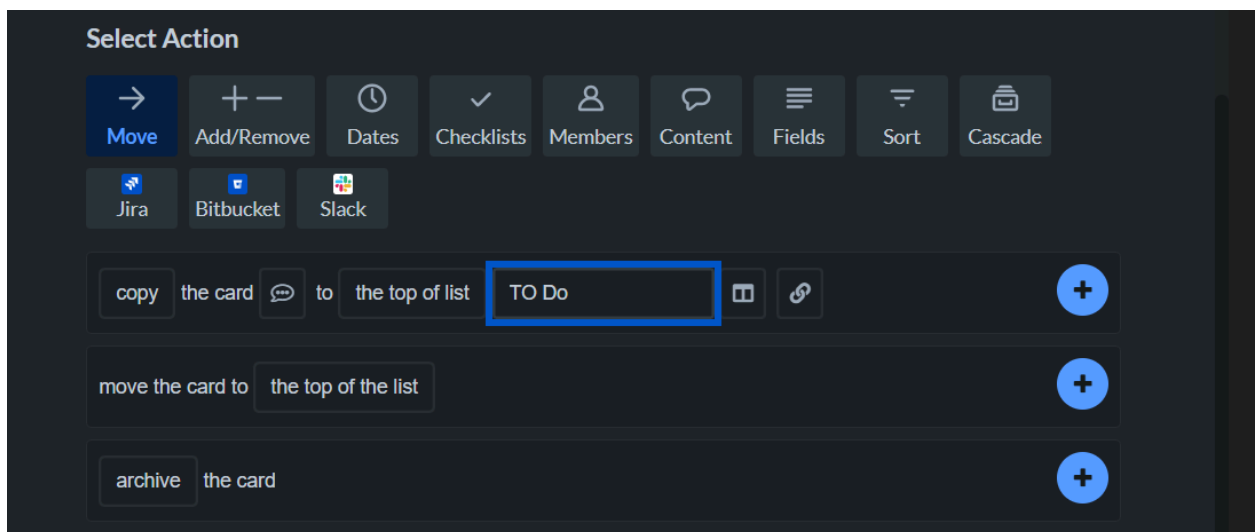

Step 10 — Add an Automation Rule

Trello allows you to automate repetitive actions using Rules. Follow these steps to add your first rule:

1. Click the **Automation** icon at the top of the board (lightning bolt icon).
2. Select **Rules** from the left panel.
3. Click **Create automation** (or **Create rule**).
4. Set the **Trigger** — Select **Card Move**,
 - a. Select: *When a card is added to list* and choose **Sprint Backlog, By anyone**.
 - b. Click on the add icon

5. Set the **Action** —Select **Move**.
 - a. Select: *Copy the card to the top of list* and choose **To Do**.
 - b. Click on the add button.

6. Click **Save** to activate the rule.
7. Test it by adding a new card to the **Sprint Backlog** — it should automatically appear in **To Do** as well.

Step 11 — Track Progress

1. As your team works through tasks, make sure cards are being moved across the lists.
2. To view the activity log, click the **three dots (...)** at the top right of the board.
3. Select **Activity** from the menu that appears.
4. This will show a full log of all changes made by every team member including card movements, comments, and assignments.

Activity — Group Submission

1. Group Details

Include the following at the beginning of your report: Index numbers and names of all group members

2. Choose a Project

Select a project theme for your board. Examples:

- Online Bookstore
- Food Delivery App
- Hospital Appointment System
- University Student Portal

Write one short paragraph in your report describing the project your group chose and what the system is supposed to do.

3. Set Up the Board

- Create your board with the six lists from Step 6.
- Add a minimum of **6 cards** to the Product Backlog representing features of your chosen project.
- For each card, fill in the description, assigned member, due date, checklist, and a label.
- Move cards across the board from Product Backlog all the way to Done following the workflow in Step 9.

4. Create Automation Rules

Rule 1 — Provided Rule

Create the following rule on your board:

- Trigger: When a card is added to Sprint Backlog
- Action: Copy the card to the top of To Do

Take a screenshot of this rule and include it in your report.

Rule 2 — Create a Rule of Your Choice

As a group, create one automation rule of your own choice.

Example: When a card is moved to **Done**, post a comment saying *"This task has been completed."*

In your report:

- Write a short description of what the rule does
- Explain why your group chose it and how it helped manage your board

Required Screenshots

Include the following screenshots in your report:

1. **Full Board Screenshot** — Take a screenshot of the entire board showing all six lists with cards distributed across different stages.
2. **Card Details Screenshot** — Open any one card and take a screenshot clearly showing the description, assigned member, due date, checklist, and label all filled in.
3. **Rule 1 Screenshot** — Take a screenshot of the Sprint Backlog to To Do automation rule.
4. **Rule 2 Screenshot** — Take a screenshot of your custom rule.
